Art of Mathematics

Snezana Lawrence

ISBN	9789059966338
Publisher	Lannoo Publishers
Binding	Hardback
Territory	World excluding Benelux France, Switzerland & Scandinavia
Size	245 mm x 185 mm
Pages	176 Pages
Illustrations	130 color, 40 b&w
Name of series	Wunderkammer
Price	£40.00

- Mathematics in all its beauty
- On mathematics and art and how intertwined they are
- A thematic journey through mathematical history
- By Snezana Lawrence, published by Yale University Press and Oxford University Press

Mathematics is art—created not with colours or forms, but through abstract thought. This is the central idea behind***Art of Mathematics*** by acclaimed author Snezana Lawrence. In this work, she explores the history of mathematics through themes such as the elements, ratio, and dimensionality, highlighting the inherent beauty of the discipline. Along the way, she presents a rich selection of artworks inspired by mathematical ideas. Through this approach, Lawrence reveals what mathematical beauty truly is: the ability to trace a thread through history that weaves together the stories of people and cultures around a single, original abstract concept.

Snezana Lawrence is a historian of mathematics with a rich background in education. Snezana has authored both popular and academic books and papers on the history of mathematics. She also led the History and Pedagogy of Mathematics International Study Group from 2020 to 2024.
