Pages	138 Pages
Illustrations	100 color
Price	£18.95

- Analyses the gridded city of Chicago, illustrating how the grid structure can be used productively in urban design
- Part of a series of four titles
- Explores the potential of the grid as a design tool

This book focusses on the city of Chicago, specifically in regards to its grid-style design. The author proposes a number of original interventions that implicate this grid in productive ways. By emphasising the value of open forms for city design, they insist that the grid has the unique capacity to channel urban transformation both flexibly and productively, *Chicago Boundless* explores the potential of the grid as a design tool in both historical and projective terms, analysing its effect on urban processes.

Joan Busquets, a world-renowned urban planner and architect, is the first Martin Bucksbaum Professor in Practice of Urban Planning and Design at the Harvard Graduate School of Design.
