- Unpublished archival research
- New attributions of several artworks
- Volume edited by the director of the Gallery assisted by scholars specialised in the productions of individual artists or regional schools, experts in the history of the gallery and a group of younger scholars of fifteenth and sixteenth century painting

The Galleria Borghese not only houses an extraordinary collection of ancient and modern sculpture, but also one of the most extraordinary collections of paintings in the world, with masterpieces by the most important European painters, including Giovanni Bellini, Correggio, Dosso Dossi, Parmigianino, Raphael, Titian, Caravaggio and Rubens.

In two volumes – the first is presented here divided into two tomes and dedicated to works created between the 15th and 16th centuries – the intention is to continue the work begun with the catalogue raisonné of modern sculpture, also published by Officina Libraria (2022), thanks to updates, discoveries, archive research and analysis of works.

The entries in this volume, preceded by introductory essays illustrating the main nuclei of paintings produced between the Renaissance and Mannerism periods in the museum, have been entrusted to scholars specialising in the productions of individual artists or regional schools, experts in the history of the gallery and a large group of younger experts in 15th and 16th century painting. The individual texts present a significant degree of in-depth study both chronologically and in terms of attribution, with notes on restorations and archival documents.

Text in Italian.
