

Godzilla and the Temple of Atomic Catastrophes

Thomas Daniell

Edited by Thomas Weaver

Edited by Françoise Fromonot

ISBN	9783038604969
Publisher	Park Books
Binding	Paperback / softback
Territory	World excluding Austria, France, Germany, Switzerland, Puerto Rico, United States, Canada, and Japan
Size	175 mm x 110 mm
Pages	288 Pages
Illustrations	170 b&w
Name of series	Gumshoe
Price	£15.00

- Tells the story of the never-realised design for a memorial of nuclear disasters by eminent Japanese architect Seiichi Shirai (1905–83)
- Examines how a single architectural design of 1955 anticipated, defined, and sparked a broad and ongoing debate in Japan’s architectural world
- Seiichi Shirai is a key figure in 20th-century Japanese architecture, yet remained largely unknown in the West to date
- The *Gumshoe* series investigates singular buildings, emulating the style and book format of a detective novel
- Distinguished authors from various countries write on notable buildings from across architectural history

In *Godzilla and the Temple of Atomic Catastrophes*, the third volume in the *Gumshoe* series of “architectural detective stories,” architectural historian and critic Thomas Daniell investigates the mysteries of the Temple of Atomic Catastrophes, designed in 1955 by Japanese architect Seiichi Shirai (1905–83). Although never built, the memorial has become a touchstone in debates about monuments, tradition, and culture in Japan’s architectural world. Shirai’s temple design is one of the few architectural works to address the topic of nuclear power, while Japanese fiction, manga, visual arts, and photography largely avoid it. Shirai and his temple design are little known in the West, yet they represent an important and influential chapter in Japan’s architectural history. The 2011 Fukushima disaster once again made him, and the questions it raised, a central aspect of Japanese architectural discourse.

Thomas Daniell examines events and developments in Japan spanning more than a century, from World War I to the triple disaster of 2011—the earthquake, tsunami, and nuclear meltdown. He explores Japanese tradition and the relationships between Japanese architecture, art, and critical theory within a broader historical context. Written in the style of a “roman noir,” his book offers an unconventional and entertaining search for the solution to this architectural mystery.

Thomas Daniell is a professor of architectural history, theory, and criticism at Kyoto University. He is the author of numerous books on Japanese architecture, including *An Anatomy of Influence* (AA Publications, 2018). **Thomas Weaver** is an architectural writer, educator, and editor based in London. He also lectures at the Academy of Architecture in Mendrisio. **Françoise Fromonot** is a professor of architectural design, history, and theory at ENSA Paris-Belleville.
