

Ice Station

The Creation of Halley VI: Britain's Pioneering Antarctic Research Station

Contributions by Ruth Slavid
Photographs by James Morris

ISBN	9783906027661
Publisher	Park Books
Binding	Paperback / softback
Territory	World excluding Austria, Germany, Switzerland, Puerto Rico, United States, Canada, and Japan
Size	250 mm x 150 mm
Pages	96 Pages
Illustrations	80 color, 8 b&w
Price	£20.00

- Halley VI is a pioneering piece of architecture and the world's first fully re-locatable research station
- The new book tells the story of the entire project and offers rich technical detail
Presents previously unpublished material

Halley VI Research Station is the first fully re-locatable research station in the world. It was commissioned in 2006 and its unique and innovative structure was the result of an international design competition in collaboration with the Royal Institute of British Architects (RIBA). The research facility is segmented into eight modules, each sitting atop ski-fitted, hydraulic legs that can be individually raised to overcome snow accumulation, allowing the module to be towed independently to a new location. Halley VI is designed by London-based Hugh Broughton Architects and AECOM, a global engineering design firm.

The new book tells the story of this exciting piece of architecture in an essay by Ruth Slavid. Around 100 photographs, mostly in colour, plans and diagrams document the various modules of the re-locatable station and its present site. Captions offering comprehensive technical information about the structure complement the images. Photographs are contributed by British photographer James Morris, who has gained much international recognition for his work in architectural and landscape photography.
