- **LA+ SENSE** contributors reflect on the many ways we come to understand our world through various senses, sensors, and sensibilities

Ever more technologies are being created to sense our environment, and much is being learned about how animals and plants sense theirs. We often think of these tools as extending our capacity for sensing what is not available through natural human perception. But what is “natural” about human perception? Not as much as was once believed, it turns out. Many of the contributors to **LA+ SENSE** consider how our senses have become naturalised, and our bodies and experiences standardised. Topics also include sense and surveillance, sense of place, and whether we can even trust our senses.

Karen M'Closkey is an associate professor of landscape architecture at the University of Pennsylvania's Weitzman School of Design and Editor in Chief of *LA+ Interdisciplinary Journal of Landscape Architecture*.
