Illustrations	120 color
Price	£45.00

- A visual treatise on the relationship between photography and architecture
- An exceptional monograph on the work of Swiss firm Bauart Architects and Planners

Promenades is both a treatise on the relationship between architecture and photography and the first book to focus on the work of the Swiss architectural firm Bauart Architects and Planners. The firm commissioned a variety of photographers working in landscape or architecture to document nine of their projects throughout Switzerland, from houses, schools, and government and office buildings to entirely new neighbourhoods. Each of the photographs represents a personal, wide-angled view of a project, drawing on the rich legacy of nearly two centuries of architectural photography. An essay by Markus Jakob explores the relationship between photography and architecture in the context of the firm's work over the course of three decades, which carefully accounts for ecology and urban and social context.

Text in English, French and German.

Bauart Architects and Urbanists, founded in 1988 and with offices in Bern, Neuchâtel, and Zurich, have gained international recognition with their designs as well as for their research and proposals in urban planning.
