The Contribution and Impact of German Educators to US Architectural Education

Steffen Lehmann

Alexander Eisenschmidt

Peter Bosselmann

ISBN	9781951541484
Publisher	ORO Editions
Binding	Paperback / softback
Territory	World excluding USA, Canada, Australasia & Asia (except Japan; China non-exclusive)
Size	229 mm x 178 mm
Pages	240 Pages
Illustrations	180 color
Price	£22.95

- Explores the history and contribution of pedagogical concepts of German-trained professors of architecture at schools in the United States

This book takes a critical look at the influence of German educators. It is a publication that explores the history of pedagogical concepts of German-born professors of architecture at schools in the United States. The research and book publication are structured in three parts; it aims to make a significant contribution to the understanding of architectural education in the United States and its historical cross-fertilisation with German educational concepts at large, with research outcomes responding directly to current and future educational and societal challenges.

The ideals of the Bauhaus school shaped more than just design and architecture around the world; these guiding principles and pedagogy also transformed teaching. The project examines the post-Bauhaus influence on these German-born educators today and how the Bauhaus model has evolved over the last 50 years. There are currently over 30 German-born educators, active in shaping architectural and design education in the US, influencing thousands of students as the next generation of future architects in this country. Compared to other professions, succeeding in studies of architecture is known as a long endeavor that requires a strong commitment and dedication from the student. The task for the educators is to shape the next generation of architects as well as possible and, at the same time, turn it into a positive experience and fun to be part of this demanding profession. The book features interviews (conversations) with selected professors and explores how the Bauhaus legacy of Gropius and Mies van der Rohe is still relevant for their educational strategies and design teaching today.

The Bauhaus aimed to unite all creative arts through direct field and workshop experience in the crafts with a concentration on modern materials, industrial techniques and mass production. It was initially a school of design which included architecture, and not a school of architecture per se. Gropius resigned in 1928, and it was largely under the directorship of Ludwig Mies van der Rohe from 1930 to 1933 that the Bauhaus developed into a school of architecture with subsidiary art and workshop departments.

The pedagogical experiments of the Bauhaus, imported by Gropius, Mies, Hilberseimer, Albers and others to the US system, challenged traditional Beaux-Arts thinking and played a crucial role in shaping modern architectural education. Historically, the German architectural training has always been different from the French tradition. These new interdisciplinary and technology-focused modes of teaching architecture and design had long-lasting impact, however, are now again transformed by the educators currently active in reshaping curricula. The conversations reveal the critical and independent thinking of this group and how they make a meaningful contribution to the discourse of architectural education appropriate to the 21st century.

Authored by an internationally recognised scholar with personal insight into the topic, the six selected educators profiled in this volume render visible a broad array of discursive pedagogical strategies that partially build on the seminal educational model of the Bauhaus; they have transformed it to a new contemporary pedagogical model. The study provides insight into the ways in which these German-trained educators influence architectural and design education in the United States to this day.

Dr. Steffen Lehmann is a full Professor of Architecture and immediate past Director of the School of Architecture at the University of Nevada, Las Vegas (UNLV). He is Director of the Future Cities Leadership Institute. **Dr. Alexander Eisenschmidt** is an architectural theorist and Associate Professor of the School of Architecture, at the University of Illinois at Chicago. **Peter Bosselmann** is a Professor of the Graduate School in Architecture, City and Regional Planning, Landscape Architecture and Urban Design at the College of Environmental Design, University of California, Berkeley.
