Pages	132 Pages
Illustrations	100 color, 40 b&w
Name of series	UFO: Explorations of Urbanism
Price	£20.00

- A comprehensive overview on an urbanisation process particular to China
- Presents original essays by experts from Asia and Europe

Village in the City investigates an equally specific and spectacular urbanisation process that many regions in China have been undergoing during the past two decades. The massive scale and the unprecedented speed of this process imply an incredible multiplicity of “villages in the city”. As such there are as many counter figures as there are “regular” and “normalised” urban environments that engulf these villages. *Village in the City* opens a window on recent research on the dynamic transformation processes villages in China are undergoing to become (parts of) cities, and contextualises this specific contemporary Chinese phenomenon in a comparative perspective for all of Asia, i.e. including India, South East Asia, and China. And it situates this development also in the history of urbanisms of inclusion.

Kelly Shannon is a professor at the Institute of Urbanism and Landscape, Oslo School of Architecture and Design (Norway). **Bruno De Meulder** is professor for urbanism at the University of Leuven (Belgium). **Yanliu Lin** works as a postdoc researcher at the department of geography at University of Utrecht (Netherlands). Their **Research Group Urbanism and Architecture** at the University of Leuven seeks innovative interplays of landscape, infrastructure and urbanisation that respond to contemporary challenges, while critically evaluating the performance and capacity of existing contexts.
