Pages	208 Pages
Illustrations	200 color
Price	\$39.95

- Humanity's first great masterpiece listed as an UNESCO World Heritage site
- One of the oldest decorated Palaeolithic caves in the world dated back 38,000 years
- An unprecedented visual immersion (200 color illustrations with full size photographic details on the paintings) and 3D visions
- An updated and pedagogic scientific survey aimed to a wide audience
- Internationally renowned expert and author on Chauvet Cave
- A site in the tourist area of Archede region (near Provence) with the world's largest cave replica attracting more than 300,000 visitors every year, among them 20% from foreign countries

Discovered in December 1994 and inscribed on UNESCO's World Heritage List in 2014, the Chauvet-Pont-d'Arc Cave is a masterpiece of prehistoric art. Far more than just a decorated cave, it boasts an exceptional state of preservation, breathtaking underground landscapes, and drawings (depicting lions, cave bears, mammoths, horses, bison, and more) in red, black, and engraved forms of unparalleled magnificence, making it a treasure of humanity. This discovery has revolutionized perspectives on Paleolithic art research. The cave gradually reveals its secrets, with animal and human traces and footprints, and datings that push back the origins of these complex graphic representations and the rituals that accompanied them far into our past.

This book offers a visual tour of the oldest adorned cave on the Eurasian continent, showcasing the earliest images created by humanity 38,000 years ago, by the species that now populates the planet: Homo sapiens.

Carole Fritz is a renowned archaeologist and specialist in prehistoric art, particularly European Paleolithic art. She was a member of the pioneering team that first explored this cave in 1998, under the direction of Jean Clottes. Since 2018, she has been leading the scientific team working in the cave. She conducts her research at Sorbonne University (Paris) and at the Maison des Sciences de l'Homme (Toulouse). With contributions from the research team handling Chauvet Cave study.
