The collection presents physiological phenomena, architectural parallels and prominent examples in architectural history. Text in German.

• The collection presents physiological phenomena, architectural parallels and prominent examples in architectural history

Franziska Wittmann researches at the Chair of Gion A. Caminada on approaches to natural physical laws and physiological factors in architecture. Instead of focusing on the creation of physical constellations through architecture, her work investigates the effects of these conditions on people. The publication presents collected physiological effects in a way that makes them applicable, with the aim of enhancing architecture. The collection presents physiological phenomena, architectural parallels and prominent examples in architectural history.

Text in German.
