- **Home** is the first photography book by Sean Palfrey, renowned paediatrician and child health advocate, featuring previously unseen work
- Through beautiful experimental photography and lyrical prose, Palfrey ruminates on the variety of human experiences of home
- Told from Palfrey's special perspective, after a lifetime of observation as a doctor and photographer

Polymath Sean Palfrey's work as a paediatrician and natural scientist informs this fascinating first entry, **Home**, into his forthcoming series of photography books. In **Home**, Palfrey shares his beautiful images and stories of the many people and places he has encountered around the world in his work and travels over the past 45 years. A lifetime of observation and experience with children is channeled into his lyrical image making and poetic text. **Home** ruminates on the variety of human experiences across the globe, from castles to cave dwellings and isolated farmhouses to refugee camps. The result is a joyous and moving book that leaves us with a poignant message: that all living creatures need to have safe places that they consider 'home', where they can be protected, loved, sheltered, preserved, fed and surrounded by community.

Sean Palfrey is a true polymath. He has had an illustrious career as a paediatrician, Faculty Dean at Harvard University and Professor of Clinical Paediatrics and Public Health at Boston University. Simultaneously, Palfrey has spent a lifetime passionately exploring the boundaries of image-making through photography, with his work as a doctor informing his practice. In addition to being a teacher, Dean and clinician, he served as president of the Massachusetts Chapter of the American Academy of Paediatrics, and he has been a legislative advocate for child health programs and policies since the late 1970s.
